CSS

Use this CSS reference to browse an alphabetical index of all the standard [CSS](#) properties, [pseudo-classes](#), [pseudo-elements](#), [data types](#), and [at-rules](#). You can organize by type and a list of [key CSS concepts](#). Also included is a brief [DOM-CSS / CSSOM](#) reference.

Basic rule syntax

Style rule syntax

```
selectorlist {  
    property: value;  
    [more property:value pairs]  
}  
  
... where selectorlist is: selector[:pseudo-class] [::pseudo-element] [, more selectorlists]
```

See [selector](#), [pseudo-class](#), [pseudo-element](#) lists below.

Style rule examples

```
strong {  
    color: red;  
}  
  
div.menu-bar li:hover > ul {  
    display: block;  
}
```

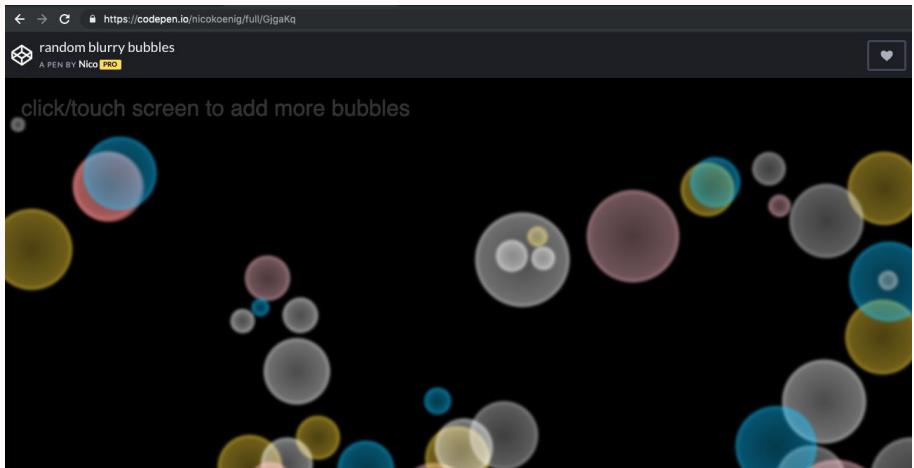

For a beginner-level introduction to the syntax of CSS selectors, please see [this tutorial](#). Be aware that any [CSS syntax](#) error in a rule definition invalidates the browser. Note that CSS rule definitions are entirely (ASCII) [text-based](#), whereas DOM-CSS / CSSOM (the rule management system) is [object-based](#).

At-rule syntax

devdocs.io

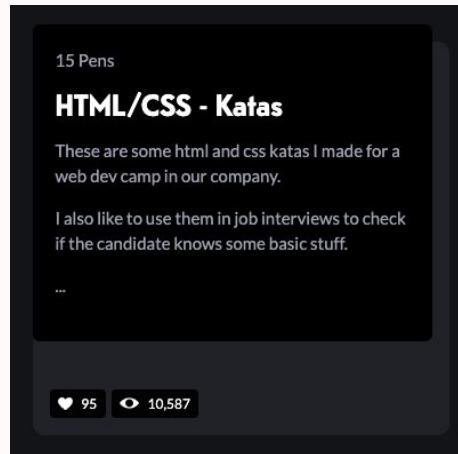

- Great documentation for most web development related topics
- Operated by [freeCodeCamp](#)

Rebuild things you see on the web

Rebuild things you see on the web

- I made my first codepen after I saw these bubbles on Apple's website
- It gave me a lot of practice
- I still use them in workshops
 - And people enjoy them

Over engineer stupid ideas

. SINCE 2016 .

Krautipsum

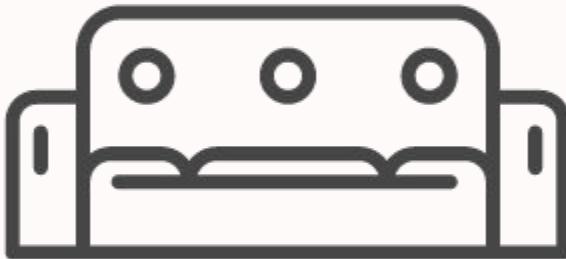

TRADITIONAL GERMAN FILLER TEXT

O bacht! Das gemach Silberblick duellieren. Wildfang und Schelm dengeln nichtsnutzg Tausendsassa. Das Hochstapler gutheißen das altbacken Wendehals. Fernweh und Himmelfahrtskommando bohnern niesacken Radage Zeche und

Over engineer stupid ideas

- Try new technologies with ideas you love
- If you fail, nobody knows
- And people might like what you do

Trust yourself and leave the comfort zone

A screenshot of a web browser displaying the MDN web docs homepage. The page has a light blue background with a large, semi-transparent dark blue cloud shape in the center. At the top, there's a navigation bar with links for Technologies, References & Guides, and Feedback, along with a Sign in button and a search icon. Below the navigation is a main heading: "Resources for developers, by developers." A search bar with a magnifying glass icon follows. Underneath, three main categories are listed: "Web Technologies" (with an arrow), "Learn web development" (with an arrow), and "Developer Tools" (with an arrow). At the bottom, there are two call-to-action boxes: one for "Build in the Browser" (with a "Learn More" button) and one for "Learn the best of web development" (with a "Sign up now" button).

@JuniorsInTech (they have a nice newsletter)

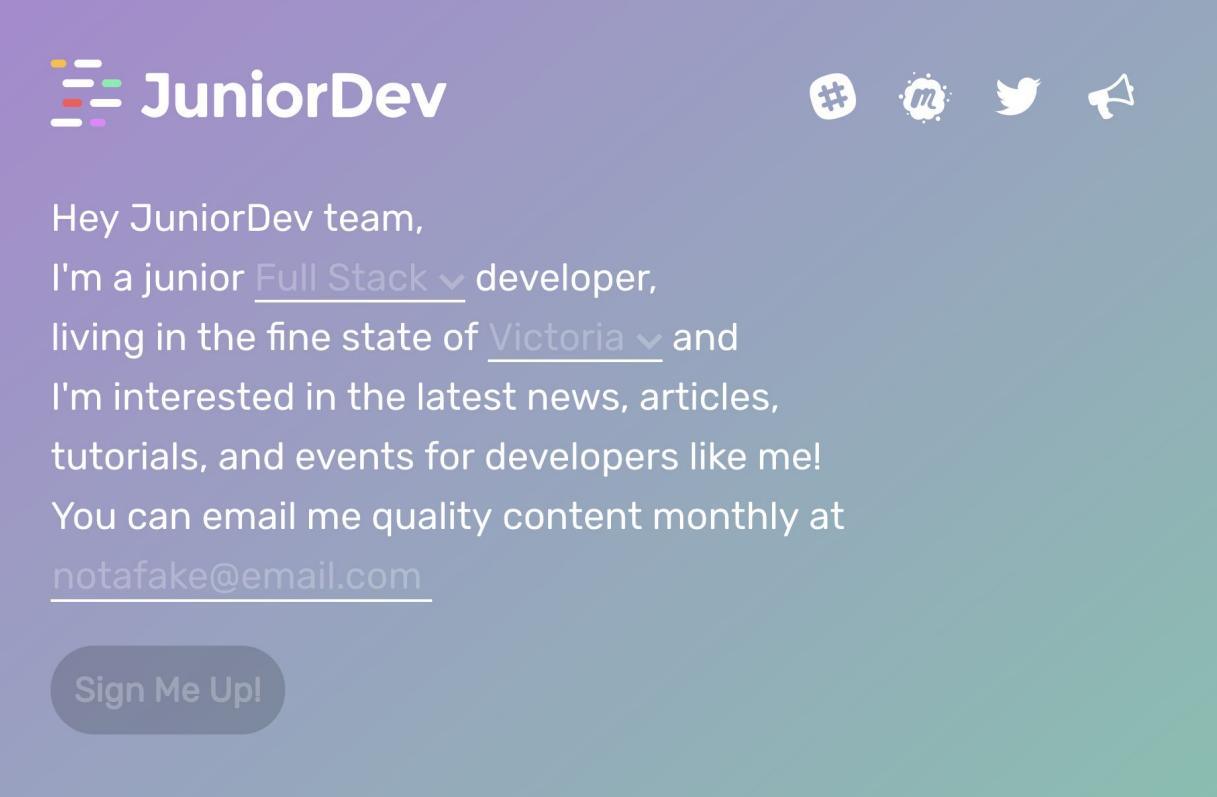

A newsletter + job board for juniors in tech.

Get a curated list of articles, resources, and opportunities for people in
tech, plus entry & mid-level jobs.

@juniordev_io (mostly in Australia but good content)

A screenshot of the JuniorDev landing page. The background is a purple-to-green gradient. At the top left is the JuniorDev logo, which consists of four horizontal bars of increasing length followed by the word "JuniorDev". To the right of the logo are four social media icons: a hashtag, a person icon, a Twitter bird, and a megaphone. Below the logo, there is a block of text:

Hey JuniorDev team,
I'm a junior Full Stack developer,
living in the fine state of Victoria and
I'm interested in the latest news, articles,
tutorials, and events for developers like me!
You can email me quality content monthly at
notafake@email.com

At the bottom left is a button with the text "Sign Me Up!".

#100DaysOfCode

#100DaysOfCode Official Website

About Connect Contact FAQ Resources Rules

#100DaysOfCode

The Official Website for the Challenge

```
private static ResponseEntity<ResModel> res(Model model) {
    var path = resHeaders.get("X-Message-Path");
    var type = resHeaders.get("X-Message-Type");
    var success = resHeaders.get("X-Message-Success");
    var error = resHeaders.get("X-Message-Error");
    var message = resHeaders.get("X-Message-Message");

    return ResponseEntity.ok()
        .header("Content-Type", "application/json")
        .body(new ResModel()
            .setPath(path)
            .setType(type)
            .setSuccess(success)
            .setError(error)
            .setMessage(message));
}
```

The screenshot shows a code editor with Java code for a REST API endpoint. The code defines a static method `res` that takes a `Model` parameter. It extracts various headers from the response object and constructs a `ResModel` object to return. The `Content-Type` header is set to `application/json`.
